Thanks

We wish to express our sincere thanks to the Joe Huber Family, to William Kirshgessner and to the staff of the Southwest Purdue Ag Program for their assistance in the design and execution of this trial. On farm trials are an important means of assessing “real world” performance of plant varieties and consumer acceptance of them. Such trials require a lot of time and commitment of the host farm...we recognize and appreciate this assistance without which this trial would not have been possible.

It is also important to recognize the continued volunteer commitment of the many members of the Sunnyside Master Gardeners Association who are dedicated to the principle of *Helping Others Grow!*
